Hyaluronic Acid Solutions,
Keeps you on the Move

Osteoarthritis & Hyaluronic Acid

Osteoarthritis (OA) is the most common joint disorder in the world affecting 200 million people worldwide. It is most frequent cause of pain, loss of function and disability in adults. Hyaluronic acid viscosupplementation is an increasingly popular non-pharmacological treatment for knee osteoarthritis. Intra-articular injections of synthetic hyaluronic acid are given to restore the natural mechanical properties of synovial fluid.

OPTIVISC

OPTIVISC

COST EFFECTIVE FIVE INJECTION HA VISCOSUPPLEMENT

OPTIVISC is highly viscous gel formulated with high molecular weight (3 Mio Dalton) injectable grade hyaluronic acid from biofermentation origin.
